

6 Conclusion

Expected outputs are committed beside the fixtures and compared byte for byte. A behaviour change that is intended is recorded by rewriting the expected files in the same commit. An unintended change fails the build before it reaches a release. The vendored table code is treated as third-party and is not edited locally.

Where the original relied on a learned layout model, a font-size rule stands in for it. The rule is coarse, but it is inspectable, and a wrong answer can be traced to a number in the source. Reviewers asked whether the approach generalises beyond journal articles; we make no such claim. Books, slides and forms have layouts these heuristics were never shown and would misread.
