

Table 1 Study 1 Descriptive Statistics of Model Variables by Experimental Condition

Variable	Hybrid A	Business	Hybrid B	Charity
Intent	5.16	4.91	5.19	5.40
Cognitive	4.64	4.66	4.43	4.41
Moral	5.64	5.35	5.62	5.89

Note. Means on a seven-point scale.

Figure 1. Effects of Hybrid on Intent to Transact.

None of these failures corrupts the surrounding text; they degrade the structure rather than the content. The synthetic set is regenerated from scripts, so a fixture can be changed and the change reviewed. Expected outputs are committed beside the fixtures and compared byte for byte. A behaviour change that is intended is recorded by rewriting the expected files in the same commit.

Table 1 reports the means by condition.

A behaviour change that is intended is recorded by rewriting the expected files in the same commit. An unintended change fails the build before it reaches a release. The vendored table code is treated as third-party and is not edited locally. Where the original relied on a learned layout model, a font-size rule stands in for it.
