

## 5 Results

Journals that style every heading identically defeat the height clustering and lose a level. Scanned pages inherit every error of the recogniser, including stray page numbers in the middle of a paragraph. None of these failures corrupts the surrounding text; they degrade the structure rather than the content. The synthetic set is regenerated from scripts, so a fixture can be changed and the change reviewed.

Expected outputs are committed beside the fixtures and compared byte for byte. A behaviour change that is intended is recorded by rewriting the expected files in the same commit. An unintended change fails the build before it reaches a release. The vendored table code is treated as third-party and is not edited locally.

**Table 1. Descriptive statistics (stored rotated)**

| Variable            | Mean | SD    | VIF  |
|---------------------|------|-------|------|
| Certified buildings | 3.77 | 11.84 | 2.21 |
| Population density  | 0.27 | 0.31  | 1.66 |
| Income per capita   | 0.04 | 0.01  | 1.35 |
| Housing starts      | 0.48 | 0.24  | 1.44 |

Notes: N = 5,110 observations. All values are synthetic.

Table 2. Descriptive statistics (printed sideways)

| Variable            | Mean | SD    | VIF  |
|---------------------|------|-------|------|
| Certified buildings | 3.77 | 11.84 | 2.21 |
| Population density  | 0.27 | 0.31  | 1.66 |
| Income per capita   | 0.04 | 0.01  | 1.35 |
| Housing starts      | 0.48 | 0.24  | 1.44 |

Notes: N = 5,110 observations. All values are synthetic.
